

JUST GLEANINGS

MASS PRODUCTION OF CLOTHING
Serge uniforms are being manufactured in Canada at the rate of almost 3,000 per day. The Canadian Army seeks at close to 6,700 pairs daily for the army and the air force.

**HON. E. C. MANNING JOINS
NON-PERMANENT ACTIVE MILITIA**

Hon. E.C. Manning, Alberta minister of trade and industry, has joined 2nd Battalion Edmonton Regiment, N.P.A.M., and has been recommended for a commission as second lieutenant.

BRITAIN BUYS ALBERTA MILK

RED DEER—The British ministry of food has agreed to buy 1,000,000 pounds of raw milk from the Central Alberta Dairy Pool's milk condensery at Red Deer. This will run about eight car loads, and other orders are expected. The pool has sold 1,000 car loads Red Deer last week end for the a-board for shipment to the Old Country.

WALTER P. CHRYSLER IS DEAD

NEW YORK—Walter P. Chrysler, automobile manufacturer, died of a cerebral hemorrhage yesterday at his Long Island home. The 65-year-old manufacturer's rise to fortune was an outstanding saga of 20th century finance.

Chrysler's death repeats the "one must insured in 20th century" One report said in 1931 he had taken out \$12,000,000 in life insurance policies.

BEWARE OF BAD CANADIANS

" Beware, my friends, of those who drop Nazi or Fascist ideas into your ears, and particularly of those who dare pretend that the general mobilization for the defense of our country is not a matter of extreme importance. You could think that those people who evidently do not love their country are better informed about the interests of Germany than those who have the interests of Canada and even the United States." —Rt. Hon. Ernest Lapointe

PROVINCIAL NEWS NOTES

EDMONTON—"Life," one of the most popular magazine, the results of mountain trip are presented. Organized by the Provincial Division, the picture shows a staff photographer and a staff writer has yielded some beautiful pictures, which the magazine now presents, including one on the cover.

Praise for Alberta's system of road-making was heard from Hon. G.S. Lear, minister of public works for British Columbia, when he visited Edmonton during the Mt. Lefroy, according to panel. Hon. Dr. A.J. Dowling, minister of agriculture, stressed the need for developing inter-trade interests between the two provinces.

Alberta's new modern road building equipment from New York, which has gone on we service, Hon. W.A. Fairbank announced last week that the machinery has been transferred to the federal government for urgent war purposes. The road and transit included the new machine which surfaces 25 feet of highway a minute—the only one of its kind in Canada.

VOLUME 19; NUMBER 30

FRANCIS POXON FEATURES IN WINNING THREE EVENTS AT BASHAW TOURNAMENT

**Pairs With Norman Nash
To Win Doubles Event**

Francis Poxon of Carbon won three events at the lawn tennis tournament held at the Bashaw Tennis Club on Saturday, August 18th. He took the Men's Singles by defeating Neville of Camrose in the quarter-finals 6-2, 6-1, 6-1, in the semi-finals 6-2, 6-3, and won the final J. Hume of Bashaw 6-1, 6-1.

In the Mixed Doubles, Francis defeated in the semi-finals H. Leitch and Storey v. Delburne 6-1, 6-1, and David Hume and Mrs. Hume in the final 6-2, 6-2.

In the Mixed Doubles, Francis won the Men's Doubles defeating in the semi-finals, and won the final J. Hume and Mrs. Hume.

They were from J. Morgan and Miss A. Torpy in the semi-final 6-0, 6-3, and defeated J. Hume and Miss A. Torpy in the final 6-2, 6-2.

Norman E. Nash of Carbon reached the semi-finals in the Men's singles by defeating H. Hume of Bashaw 6-3, and C.W. Storey of Delburne 2-6, 3-0, default.

NEW WAR LOAN IN SEPTEMBER

OTTAWA—Canada will issue a second war loan next month, setting a total of \$200,000,000 for war funds. Finance Minister, Mr. Martin, said.

Holders of Dominion of Canada 4% cert. b.—^{cert.} September 1st will be given an opportunity of exchanging their maturing bonds for new ones of the same issue. This will be in addition to the total to be raised in money.

LONG YEARS AGO

August 22, 1929

A silent policeman has been installed on the corner at the Club Cafe.

Carbon High School pupils have leased the old pool room across from the C. H. Nash store, and use the building for lodge rooms and other purposes.

Carbon High School pupils have made a good showing in dental contests, under the direction of principal Joe C. Conroy. Out of 212 pupils written in June, pupils passed in 162, making a total of 72 per cent for the high school.

1929 duck hunters will open the season limit of 150 birds on Aug. 20th. Bag limits are 10 ducks, 30 per day and 200 for the season. There are no ducks around Carbon this year.

Crop yields are being reported and what is averaging from 9 to 22 bushels to the acre, the poorest crop in the history of the district.

POPE LEASE RIFLE CLUB DANCE AT C. ANDREWS

The Pope Lease Rifle Club held a very successful dance at the home of Mr. Chas. Andrews last night and total gross amounting to \$64.00. This was donated to the Heskelet Red Cross. Mr. Chas. Andrews paid pig, while Armstrong, the angle cab, donated by Mrs. Crowell was purchased by Pete Neilson.

C.E. JOHNSTON M.P. PUTS RESOLUTION TO HOUSE

The following is copied from the report of the House of Commons: Debate, Aug. 18th, 1918. The men of Camrose in the semi-finals 6-2, 6-1, 6-1, in the final 6-2, 6-2.

Mr. JOHNSTON (Bove River): I have just rec'd a telegram from a group of farmers in my district. I did not read it to the house, and I do not know if it is worth while to repeat it, but the resolution was introduced in Carbon by 160 farmers on Aug. 18th.

Mr. JOHNSTON (Bove River): I have just rec'd a telegram from a group of farmers in my district. I did not read it to the house, and I do not know if it is worth while to repeat it, but the resolution was introduced in Carbon by 160 farmers on Aug. 18th.

War's Moral Obligations

This war is an all-embracing war. Let us hug to himself the illusion that the effects of this tremendous conflict will be limited to Europe, Africa and Asia; will not affect his welfare, his future destiny and perhaps his very existence, no matter in what part of the world he may have his domicile.

Even as the ripples caused by a stone cast in the water spread through the length and breadth of a mighty ocean, the repercussions of a war which destroys a home in a village in south eastern England are felt in Ceylon and Honolulu, in Brisbane and Winnipeg. The most remote and hidden spot in the world cannot escape the effects of carnage and destruction.

The greater the forces of destruction, the more widespread and the more intense is the responsibility of humanity to stop the war. The greater the war lasts the deeper and the more tragic will be the wounds inflicted physically, economically, socially and politically. The whole of humanity is bound to suffer the ill effects of the slaughter and destruction. Hence, the necessity for as speedy a termination of the war as possible.

The only insurance of an early ending of this war is its prosecution with the utmost vigor as can be marshaled by all the resources of manpower, skill and material at the command of the Empire and Allies and Friends. In Canada, an important step in this direction has just been taken in the registration of the manpower of the nation, recently completed under the direction of the New Ministry of War Services.

Only A First Step

Designed for this very purpose—the persecution of the war with the utmost vigor and thereby its sterner application—this national registration is all to the good and highly laudable. It places on record, as far as it is possible to do so, the total capacity and potentialities of every individual in the nation. The avowed intention is to utilize the services and talents of every individual, as revealed by this survey, to the best advantage in the one great objective of winning the war, and winning it with the greatest possible dispatch.

But the most important aspect of this registration is only the first step to that ultimate end. If the work of documentation just undertaken is to be effective, it must be utilized to maximum advantage. There is every reason to assume that that is the intention of the government, under whose direction registration has been made, but it must not be overlooked, that if this intention is to be made effective, women must be included.

The willingness with which the people of this country went to the booths and gave the information which was sought must be backed up by an equal willingness—nay, an enthusiastic desire, to undertake whatever effort may subsequently be assigned to him or her as his or her share of the joint national effort, and to carry out such assignment cheerfully, willingly and with the best of heart.

To the extent that the individual displays reluctance in carrying out the task assigned, to the extent that he or she permits the temptation to slacken, to the extent that any disposition to grumble is permitted to have effect, to that degree the nation's war effort will be hampered and to that extent will the day when victory shall crown the country's war efforts be delayed.

With this truth imprinted indelibly on every mind and with every lion gritted up to hasten the time when the great objective of our sacrifices shall be achieved, the loyalty and co-operation of every individual in the country should be assured.

Everybody's Job

There are foes within as well as foes without, and not the least of them is the slacker, who may be well meaning enough, but who is willing to let George do the work, the doing of it represents inconvenience to himself or someone on his part.

That, however, is not the spirit in which this war can be won. The enemy is too powerful, too dangerous and too well organized to be overcome by headlong efforts. His methods of fighting are too insidious to be beaten by anything less than complete mobilization, not only of such concrete things as men and material resources, but also of those more intangible resources of the spirit and the mind, courage, determination, loyalty, co-operation and the will to do the best of one's ability and capacity, regardless of physical discomfort.

In this truth in things that the people of Great Britain and of Canada exist, and in this lies the secret of their success to date, but the moral and spiritual resources must be marshalled and put to the maximum degree, as well as those of a physical character, if the war is to be won and won speedily. And that is the job of every individual. It is everybody's war.

Just A Reminder

When one reads of five British airmen attacking a flight of 100 Germans and chasing them out, it is a reminder of the verse in Leviticus, Xxi., 8: "Five of you shall chase off ten thousand, and of you shall put ten thousand to flight."

Egypt will plant seeds of the best American tobacco to test the possibility of raising more of the leaf.

Must Rely On Harvest

Denmark Cannot Import Fodder Necessary For Her Livestock

Curtailment of Denmark's exports of foodstuffs due to war stoppage of her fodder imports was foreshadowed in a report of the agricultural council.

The council estimated that butter exports would drop by 100,000 tons, slaughtered pigs from 180,000 to 40,000 tons, eggs from 100,000,000 to 20,000,000.

Exports of live pigs will decline from 4,000,000 to 2,000,000, cattle from 3,300,000 to 2,800,000 and chickens from 12,000,000 to 7,000,000.

The report said Denmark must depend exclusively upon her own hay and grain to feed her livestock.

Placer Mining

Men Still Mine Money Panning For Gold In The Yukon

The days of the Klondike are far from over, according to the Mines and Resources Department's annual report on placer gold production.

Men still "pan" Yukon streams for gold and during the fiscal year ended March 31, 1940, production amounted to 10,000,000 dollars, an increase of 17,000 ounces from the previous year.

"After almost a half century of continuous operation the famous placer fields of the Klondike still have gold-bearing reserves of a magnitude which will last for years of success," the department says.

The old pan, rocker and sluicing methods, however, have given way to highly rugged dredges, mostly operated by mechanical development of the water power of the area. During the fiscal year 11 dredges operated and they handled more than 10,000,000 cubic yards of gravel.

On the average, 2,944 dollars of gold of standing of worth \$2,000 per ton were produced in the Macmillan district and 103 in Whitehorse. The high price of gold in recent years has drawn increased attention given the Yukon's placers.

"Placer operators are working over the old Klondike diggings and the lower grade ground which was neglected in the days of '98."

Placer gold is placed in large-scale dredging, extensive stripping and thawing operations, preliminary to

large-scale dredging, were carried out on several claims.

More Generous Gift

Two Received In London Recently Deserve Special Mention

A poor woman's gift of £159 (\$170) to the London Girl Guide Association, a working girl's entire savings, £100 (\$145) and a sum of £100 given by others which have been received in London by the National Savings Committee and the Red Cross, respectively.

In a clumily tied paper bag the poor woman sent her name, address, name and any other identification, left £159 in old treasury notes and a scrawled message which read:

"Please will you share these notes for the Red Cross and to help the war?"

The other case came from a working class girl who lent her entire savings of £100—10 to the Government free of interest for the duration of the war.

An Ideal House

Everything In Five-Room Exhibit At Work, Work Is Worldwide

For two and a half years an exhibit in New York has shown a washable house, everything in the five rooms being washable with soap and water. The wallpaper is really washable and the curtains, furniture covers are of jute or cotton, the diapers are of chintz and everything else is unpolluted by laundering. There is a composition wall cover which is washable by water, which is washable. Wall paper painted in flat wall paints are also washable.

Misjudged His Passenger

A Canadian tourist at Euston station and asked a taxicab to drive him to Waterloo at four o'clock.

The driver thought he could do it in three minutes. The traveller got inside and after three minutes of driving the taxicab drove the Scotman by devious ways across London.

When he was set down at Waterloo, the Scotman sought a policeman.

"What's the fare from Euston?" he asked.

"About three shillings," was the response.

"Here," said the Scot, handing him the money, "will you settle with the driver while I get my ticket?"

Play White Bomb Fall

Miss Ann Campbell, home in Milltown, Ont., a specialist in diseases of the foot, who is busy discovering the Fifth Columnists of the epidemic world, has an especially built laboratory at the new Canadian Red Cross Hospital in England as his headquarters.

She said English men, women and children play games and hold spelling matches in air raid shelters during bombing attacks.

Eggs with thin shells are laid by hens that get a diet poor in calcium.

A Recent Discovery

Scientists Report Finding Radio Pathway From North To South

The following interesting article is by Stephen J. McDonough, Associate Press Science writer:

During the last few years, a mystery linking all of the Americas has been reported by scientists of Argentina and the United States.

Dr. A. T. Carrasco of the Argentine Ministry of the Interior and Dr. J. H. Dillingham of the United States Bureau of Standards, said in a joint article that during the northern winter and southern summer radio signals from the Americas north of 25 degrees latitude broadcast between the United States and Europe.

They declined to comment on the scientific and popular value of this radio link. They did, however, point out that it makes possible closer radio and telephone communication in the western hemisphere.

Electrostatic storms occur constantly in the hemisphere and interfere with radio communications. They were analyzed by Dr. Carrasco and Dr. Dillingham in terms of the magnetic field of the earth near the north magnetic pole and the aurora borealis, the effects being more pronounced in high latitudes.

Britain Has Tremendous Problem In Control And Distribution Of Food

The reason that the British Ministry of Food asks to deal with a central agency when buying food supplies is because it must buy in large amounts and centrally. Dr. C. D. Allen, Agricultural Commissioner, Marketing Service, Dominion Department of Agriculture, states at the Dominion - Provincial Agricultural Conference, held by the Agricultural Supplies Board, which was held in Ottawa, July 15-20.

This policy is necessary because the control and distribution of food both imported and home produced is a tremendous problem and the demand is for the control to become even more intensified. This has meant a vast reorganization of the means of handling all food products.

The cost of foodstuffs in Great Britain have been increased by the profit of shipping under war conditions. Shipping dates are not made known to the public nor to the trade. Once necessary articles are irregularly sent to the public in Great Britain, it is easy to do so."

The diets on which the people are living cannot be compared with those before the war. Dr. Allen said. Standards have been established and continually modified to a greater extent.

"We will be misled if we compare conditions there now with those existing before the war." If it is necessary to obtain food quickly and cheaply and without trouble then those products will be considered. But if they are too difficult to obtain, they will not be considered. The diet is not a diet well balanced, it is not nutritious. Dairy, bread, meat production is being maintained, but hogs and poultry are being restricted.

This interferes with the free flow of goods in a manner which cannot be realized here in Canada.

While the British Ministry of Food has control over both imported and home produced food, it, in turn, is subject to the rigid regulations of the Treasury and Treasury rules are as iron hand, said.

He pointed out that paying for goods is a comparatively simple matter when it is all within the country for there is no question of foreign exchange. As far as Canada is concerned, there is an adverse balance of trade against Great Britain to the amount of about \$500,000,000 for the an iron hand, said.

The Discomforts Of War

Are One Thing English People Do Not Complain About

W. L. Clark, in the Windsor Star, says:

"It's the same old England, Mr. William W. Matherne of Canadian Mothers of London, England, has just returned from England, where she was with her soldier husband," she says:

"The English people amaze me. They grumble continually about the cold and they never seem to get used to it. And it is cold. I've never been so cold in my life and for the first time I had to wear woolen clothing."

Canada has got used to living over a fireplace with the rest of the house freezing. They grumble about the heating equipment, or lack of it, though they are not doing about it, about the discomforts and dangers and anxieties of war; they have nothing but the most cheerful outlook. I never heard a word of complaint about the war or its effects. They are not afraid to do damage me. I love England. The people are so very brave. And they are without any fear whatever regarding the final outcome of the war."

It's the same old England, too, complaining about the cold and making no effort to improve on the little fireplaces. But, never complaining about the war. When they think of that, they are simply determined to see it through to victory.

Production Doubled

The output of guns guns in July virtually doubled the revised schedule arranged in April when production began. The initial instead of the date originally planned, according to Honorable C. D. Howe, Minister of Munitions and Supply. The results achieved to date indicate that within six months the monthly production may be five times as great as that originally planned.

Refugees Get Cheaper

Thousands of French civilians suffered in salt as an energy producer says the famous ginger water of the barrel nests and the almost equally famous oatmeal water of the athletic fields have been most effective when fed of fatness by a liberal pinch of salt.

Proves Insulator Effective

Captain Disconnected It While Anchored And Ship Was Destroyed

The story tells how effective the "degaussing" equipment is in insulation ships from the magnetic mines Germany strews around Britain's coasts.

A neutral ship several weeks ago was taking for Scotland and had to anchor at night. It was using up a waste of electricity to keep the "degaussing" gear in operation while the ship was at anchor, the captain ordered it switched off.

As soon as the engineer turned the switch, the ship blew up. It had been anchored over a magnetic mine.

The Use Of Salt

Thousands of French civilians suffered in salt as an energy producer says the famous ginger water of the barrel nests and the almost equally famous oatmeal water of the athletic fields have been most effective when fed of fatness by a liberal pinch of salt.

Barring mishaps, a termite may live five years.

A Prairie Sailor

Many of the youths now serving Canada on the sea were drawn from an inland. The bewhiskered young sailor shown emerging from the depths of an Atlantic Coast mine-sweeper hails from Regina. Canadian Official Photograph. Passed by Censor.

British Building Program

Factories Being Designed With View To Save Precious Supplies

Following investigation by the building committee of the department of scientific and industrial research for the building of factories with very little steel - to contain the cost of supplies - no wood at all, and a minimum of glass - as an A.R.P. measure.

Strength and safety of the structure will be preserved, the sponsors of the scheme say, by the maintenance of windows and roof-lights.

The investigations, it was explained by Dr. E. V. Appleton, secretary of the department, are part of the government's scheme to spend over \$8,500,000,000 on building in 1940.

With the exception of steel and timber, the cost of yet more expensive of building materials is mainly of steel is being effected in the roofs of the new buildings.

Summing Up It Up

Whether You Accumulate Money Or Not You Are Criticized

The London Daily Sketch says if you run after money, he's a money-grabber; if he keeps it, he's a capitalist; if he gives it away, he's a fool; if he hasn't got it, he's a ne'er-do-well; if he doesn't try to get it, he's lacking ambition; if he gets it without working for it, he's a parasite; if he accumulates it after a lifetime of hard work, people call him a fool who never got anything out of life.

Airplane Construction

According to Hon. C. D. Howe, Minister of Munitions and Supply, the anticipated cost of airplane construction on 77 projects now approved by the Air Ministry, plus those with the Joint Air Training Plan is \$15,500,000. Up to the present it has involved the purchase of 30,000 acres of land at a cost of approximately \$2,000,000.

About 10 per cent. of the maple products consumed in the United States are from Canada.

The Fifth Horseman

Pestilence May Have To Be Reckoned With In Europe

If Belgium were to be the only country to suffer in Europe, its position would be bad. But Belgium will not be the only victim. Norway must try to live on fish in the dark winter months; Denmark and Holland already see their grain stocks for the winter under; in Northern France the golden wheat stands high in the fields, with one to harvest it, no one to keep it from going to seed. The abode of most of Europe is busy harboring the pestilence.

The Fifth Horseman of conquest, war,

famine and death ride high through the European skies; and yet Fifth Horsemen may yet ride through Europe, across continents

where people will be cold as well as hungry, as vulnerable to disease germs as they were to the dive-bombers and tanks of the German army - New York Times.

Modern Dive-Bombers

Germany Relying On New Type With Kind In Wings

Observers believe that Germany has placed the greatest reliance in two principal dive-bombers - the Juks-87 and the Juks-88.

The Juks-87 is one of the first machines to be designed wholly as dive-bombers. The Juks-88 is a

development of the Juks-87.

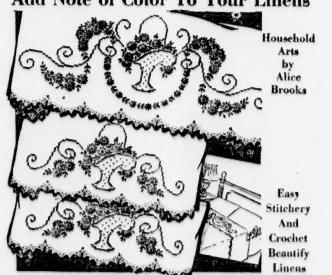

In appearance, the Juks-87 is a compact, single-seated, monoplane, sturdy built and well finished. The centre sections of the wings are set at a downward angle of 12 degrees from the horizontal. The outer sections have an upward angle of eight degrees. This gives the wings of the Juks-87 a characteristic kink.

In appearance, the Juks-88 is a

single-seated, twin-engine, monoplane, sturdy built and well finished. The centre sections of the wings are set at a downward angle of 12 degrees from the horizontal. The outer sections have an upward angle of eight degrees. This gives the wings of the Juks-87 a characteristic kink.

A man in Brookline, Massachusetts, has grown a strawberry nine inches around. Still, would a strawberry shortage be quite the same if it could all be made from one berry?

Add Note of Color To Your Linens

Only easy stitchery is required for this colorful design. Use it on house hold linens, adding the crocheted edging. Pattern 6700 contains a frame for pattern of an 8 x 20 1/2 inch and two 5 1/2 x 11 inch motifs; illustrations of a cornucopia, a stylized flower, and a corn stalk.

To obtain this pattern send 20 cents in coin stamp and a self-addressed envelope to Household Arts Department, Winston News Paper, 175 McDermott Ave., E. Winston.

There is no Alice Brooks pattern book published

Some Forage Crops Can Be Successfully Grown Where Soil Is Alkaline

Saline soils are very common in the semi-arid region of Western Canada. In Saskatchewan alone, the Soils Department has mapped 900,000 acres as saline soils. This does not include areas of small salt flats. The size of the mapping used, nor does it include the Yukon series associated with local saline areas.

In irrigation areas much valuable land is lost because of the excessive salts in excess quantities. The remedy unquestionably is to get rid of the excess salts by flooding and drainage. Such projects often involve considerable work and require considerable time.

It is evaporation which causes the appearance of alkali at or near the surface. Where a high water table exists, frequent cultivation checks the soil and may be adopted where the water is high. A dry or hard crop is quite satisfactory where the surface is kept in the condition of a loose dry mulch. Cover crops such as alfalfa check surface evaporation. Alfalfa is particularly where the surface is kept in the condition of a loose dry mulch. Cover crops such as alfalfa check surface evaporation. Alfalfa is particularly where the surface is kept in the condition of a loose dry mulch. Cover crops such as alfalfa check surface evaporation. Alfalfa is particularly where the surface is kept in the condition of a loose dry mulch.

Where the saline areas are small the condition may be corrected by heavy applications of barnyard manure. This method has proven successful especially where several applications have been made over a period of two or three years.

Soil salinization is due to irrigation, drainage, fertilization, some crops thrive on soils so impregnated with soluble salts that the majority of crops could not survive. These

Bullet Proof Vest

Inventor Claims It Will Stop Machine Gun Bullets

A protective vest, designed by Major W. H. Cross, Oakville, Ont., to stop machine gun bullets, was tested by Inspector William Bolton, of the Toronto Police. The inspector announced Major Cross "has got something."

Major Cross, a former Imperial soldier, said he had been told that his vest is light enough to be worn without difficulty. The material is made from a rock found only in Canada.

Inspector Bolton tested the vest by firing 38 calibre revolver bullets and .45 caliber sub-machine gun bullets at it. "The bullets went into the material but did not go through," he reported. "The machine gun bullets after wards and they passed as if they had been turned inside out."

Arm Production

Men Withdrawn From Army In Britain To Speed Work

There will be no slackening in the work of men and women engaged in the manufacturing of arms in Britain, the Minister of Defense reported.

Arms production is so urgent that many thousands of skilled workers are being withdrawn from the armed forces to help the ministry of labor to bring many of Britain's new arms factories into full production as rapidly as possible and to man extensive new ones.

There has been an effort, without parallel in the history of the armament industry in Britain, the B.M.C. said. Aircraft bombs, guns and shells have reached output impossible a few months ago.

Censorship Is Strict

Editors In German Occupied Norway Have Hard Time

Indications of strict censorship conditions under which editors in German-occupied Norway have to work are shown in a despatch from Stockholm received by well-informed Norwegian quarters in London.

Statements from German military authorities must be published textually and any deviation from the accepted text must be approved by the censor in certain positions in the paper must be obeyed. No speeches by members of the Norwegian Royal Family, the Norwegian Government and the general staff may be reproduced and may their photographs be published.

Official communiques emanating from countries at war with Germany must not be printed except when they are sent and timed by the German-controlled telegraph agency in Oslo. News broadcasts from these countries also must not be used. Communiques from the German High Command must be printed in full type.

One Drawback

People millions of women envy the Queen. But her position is unique.

When she is absent and thus the Queen Elizabeth was 40 the whole world was told about it.

England is cutting down war luxuries, but it will lessen its war effort if it deprives Winston Churchill of his cigar.

Refugees Get Cheaper

Thousands of French civilians suffered in salt as an energy producer says the famous ginger water of the barrel nests and the almost equally famous oatmeal water of the athletic fields have been most effective when fed of fatness by a liberal pinch of salt.

Barring mishaps, a termite may live five years.

In Germany, it seems, bread made from hay flour forms a stable diet.

Great Britain's "soft dogs" required 2,000 guineas (\$40,235) through the sale of a dog. Matt Jackson-Lipkin offered at auction his prize pup - "H.M.S. Hardy" - for sale in a theatre at Johannesburg, South Africa.

WORLD HAPPENINGS BRIEFLY TOLD

By voluntary subscription Americans have raised \$45,000 to help Great Britain prosecute war.

The government of India has prohibited exports of coal to European countries excepting the United Kingdom.

Financial institutions in occupied France have been placed under German supervision by orders of Commissar-in-Chief Walther von Brauchitsch.

The United States commerce department reported that gold imports during July amounted to \$10,974,000, nearly half of which was in foreign coin.

Raised through a public subscription, £8,000 was cabled Lord Beaverbrook from Kingston, Jamaica, to buy the fifth bombing plane donated by this British West Indian colony to the Royal Canadian Air Force.

5000 Motorized American governors of the Bank of England had the lawn of his Kensington home dug up and turned into a cabbage patch to live with the country's wartime industry.

The Canadian government hopes to raise \$50,000,000 this year through participation of the public in the war savings program. Hon. Colin C. W. Gowan, minister of national revenue, said that interest will be 4%.

Clement Attlee, lord privy seal, informed the House of Commons that 120 interned enemy aliens have been sent to concentration camps in Canada and Australia in the "interest of security" because of threatened German invasion.

Canada's output of munitions is stepping up rapidly, according to Hon. C. D. Howe, minister of munitions and supply. The first 10 cent import tax, they state, will make the importation of packages very expensive. Another good reason is the difficulty in obtaining permission to send money out of Canada.

Praise For The Beaver

BEST LITTLE ENGINEER GETS CREDIT FOR CONSERVING WILD LIFE

He may be only a rodent but the beaver of our northern streams is the most little citizen of the animal world.

For many years he has been hailed as a lumberman, mason and engineer extraordinary, besides being generally regarded as the king of fur-bearing animals.

Now the Utah fish and game commission comes forward and acclaimed him as the peerless conservationist of wild life. E. S. Forsyth, Saskatchewan game warden, states that he has back up that statement from his own experience in the province.

"First the beaver goes in and attends to the engineering work," explains Mr. Forsyth. "Then the muskrat comes, and after them come the woodpecker. Fish multiply, too, because the beaver does not feed upon flesh."

Results of the Utah investigation may be taken as authoritative since the observations were spread over 20 years during which time 850 acres of beaver colonies scattered over 275 miles of the Wasatch National Forest, received attention from American experts.

The study included 1505 beaver dams averaging 82 feet in length with a normal height of about two feet.

"Beaver ponds result in many benefits," states the report. "They build by the beaver, regulate and maintain the water flow, reduce floods, prevent erosion, and catch the silt carried by streams, thus preventing the streams either from reservoirs, lakes and reservoirs. In addition, the formation of ponds generally benefits other wildlife including muskrat, mink, deer, ducks and upland game birds."

Gas Masks Supplied

All Canadian troops engaged overseas were equipped with respirators, according to Hon. J. L. Richardson, Minister of National Defence. All gas effects are now covered with gas masks and Canadian production is geared not only to fill Canada's requirements but also to furnish a substantial number to Allied troops.

"To day, nearly all of the really good foods on earth are available nearly everywhere," says a writer, contrasting limitations of ancient diet.

Kultur Is Out

Word Unknown To Hitler Is

The Buffalo Courier-Express says during Kaiser Wilhelm's war there was much talk of the aims and purposes of the Germans' plans to spread Kultur. It is hard to imagine a vaguer relationship to the obvious Nazi translation culture, but no one outside Germany could see the point. Kultur, Blut und Stahl (culture, blood and steel) probably seems like a good idea to Hitler.

Hitter's war, there is no mention of Kultur, which has been outlawed and has been supplanted by such war cries as Lebensraum, Aryan and Hurengang. The shibboleths of old have been said about again, but do have the merit of frankness which the shibboleths of the World War lacked.

Another Proof Of Barbarism

GERMANY: FORTRESS JEWISH HOSPITAL TO DISPLAY RED CROSS SYMBOL

The Germans have forbidden Jewish hospitals to exhibit the Red Cross flag or paint the Red Cross symbol on their roofs. Thus, in the hospital of Berlin, it will be impossible to distinguish a Jewish hospital from any other building. And, of course, it is hit.

The capacity of the Germans for thoughtlessness and blindness is almost without parallel. It is about the nadir of immorality. If a Jewish hospital happens to be hit, then the Germans will charge the British with bombing hospitals, and send photographs all over the world to prove it. —*St. Thomas Times-Journal.*

Advice To Beekeepers

More Bees Should Be Wintered Than Summer

Beekeepers are advised to winter more of their bees than usual, by L. T. Floyd, Manitoba provincial apiculturist, and Bert Martin, entomologist at the University of Manitoba. The extremely late blooming of canola this year and the 10 per cent import tax, they state, will make the importation of packages bees very expensive. Another good reason is the difficulty in obtaining permission to send money out of Canada.

Canada's output of munitions is stepping up rapidly, according to Hon. C. D. Howe, minister of munitions and supply. The first 10 cent import tax, they state, will make the importation of packages very expensive. Another good reason is the difficulty in obtaining permission to send money out of Canada.

Prize For The Beaver

BEST LITTLE ENGINEER GETS CREDIT FOR CONSERVING WILD LIFE

He may be only a rodent but the beaver of our northern streams is the most little citizen of the animal world.

For many years he has been hailed as a lumberman, mason and engineer extraordinary, besides being generally regarded as the king of fur-bearing animals.

"To day, nearly all of the really good foods on earth are available nearly everywhere," says a writer, contrasting limitations of ancient diet.

I Read --- And Write --- For You

BY JOHN C. KIRKWOOD

You can be taught fishing—angling by Columbia University. An extension course of this institution teaches one about fishing, lures and how to mount your big ones, and a deal else. The course is "Fishing and the Practice of Fresh Water Angling." What would be? You just may not know what that means. Your mother or friend who knows you who hears you will know what it means.

After that word "bore," I heard a definition of it which was new to me. A bore is a man who persists in talking about himself. I am not a bore, but I am a bore about myself. I have been taught fishing which has the merit of frankness which the shibboleths of the World War lacked.

Now and then Hitler "thanks God" for something or other, which suggests he has religious inclinations. I am not sure whom we have come to believe are not very saintly, bought more Bibles last year than ever before in my memory. Perhaps they think that the possession of a Bible is a talisman.

Quoting an anti-malarial, has its consumption increased by war, and is, of course, always in demand for medical purposes. This kind of artificial product is "stearbine." Used to be "to move efficient, reliable, rapid and effective" and then withdraw so that Uriah might surely meet his death. Thus Uriah might be killed by stearbine, was it not? David married Bathsheba, his wife. Nathan the prophet came to David and told him that the price of the lamb he had "exceeding many flocks" was 1000 shekels. Uriah the Hittite was a good soldier, but he was not a good neighbor, his only possession which he had brought up and nourished.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

Uriah the Hittite with the sword, and then Uriah's wife, Bathsheba, was taken by David.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

Uriah the Hittite with the sword, and then Uriah's wife, Bathsheba, was taken by David.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

Uriah the Hittite with the sword, and then Uriah's wife, Bathsheba, was taken by David.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

Uriah the Hittite with the sword, and then Uriah's wife, Bathsheba, was taken by David.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

Uriah the Hittite with the sword, and then Uriah's wife, Bathsheba, was taken by David.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

Uriah the Hittite with the sword, and then Uriah's wife, Bathsheba, was taken by David.

And David's anger was greatly kindled against the man; and he said to the captain of the guard, "Kill him."

BRITAIN HURLS DEFIANCE AT THE NAZI AIR RAIDERS

Washington.—The British struggle for survival battle of Britain after two months of Nazi air attack, unrelenting in a week of mass bombing or unparalleled ferocity, is that the British bulldog still is growing back despite the losses.

The Nazi victory schedule, it is said, set mid-August for Hitler's triumphal entry into London. The time table is definitely disarranged. Mid-August was marked by a curiously quiet Nazi strafing of England. Berlin spokesman said bad flying weather caused it. Britain charged it up to huge air losses inflicted on the foe in four previous days. Thus, Aug. 15, the British returned in force.

During the lull there was an obvious feeling in England that the first phase of the battle was over, that daylight bombing was passing and that prospects of war were through until long nights come to Britain's aid were brightening hour by hour.

Prime Minister Churchill took notice of the lull and issued orders that the date of invasion was far off past. He voiced grim determination that there should be no letdown.

The Berlin explanation that bad weather caused the brief respite in aerial warfare did not seem to convincing. It is not verified by either weather stories from Britain's channel coast. Certainly flying conditions were not such as to prevent British bombers from surging across the channel to storm the night in Nazi bases along a hundred-mile front.

Whatever the real reason, the German bad weather explanations fails that to explain the Nazi's lack of bad weather will be the rule in the North sea and English channel, not the exception. Equinoctial storms of unpredictable force and duration can be expected there by mid-September, and probably earlier, as a prelude to the Sept. 22 equinox in those shallow and temperamental waters.

It follows that the Germans must achieve victory, whether by invasion or by utterly devastating bomb attack, before then, and the known results of the Nazi blitzkrieg up to now do not indicate that prospects of a quick victory have greatly brightened for Hitler in the nearly two months the fight has raged.

Italian Casualties

List Confirms British Claims Of Enemy Losses

London.—The ministry of information declared that Italian casualty lists have been falsified and that of a "conservative character" of British claims of enemy air losses.

"Thus in July, 1940, the total of Italian aircraft claimed destroyed by the R.A.F. was 70 confirmed. Of these, 60 were destroyed on the ground; that is to say, without pilots," a ministry statement said.

"Italian casualty lists for July admit the loss of 76 pilots killed and missing, a number exceeding the total claimed by the R.A.F."

English Plum Pudding

Boston.—Ten thousand English plum puddings for American Christmas tables came to America a few days ago. Christmas customs are revisited the arrival of 1,000 cases of the delicacies on a British vessel. The famous puddings usually are made this time of year held in England for ripening in the fall. Due to a holdup abroad it was decided to send the puddings to American warehouses for ripening.

French Warships In Action

London.—French 77mm guns manned by men of free French from French ships shot down two enemy bombers during a naval raid on a south coast naval base, it was announced from headquarters of General Charles de Gaulle, leader of the French forces fighting with Britain.

Federation With Canada

Kingston, Jamaica.—Resolutions favoring the federation of Jamaica with Canada as a West Indies province of the British Empire were passed here at a meeting attended by members of the Progressive League and private citizens.

Chef Engineer Dies

Winnipeg.—Edgar M. M. Hill, 58, chief engineer for the western region of the C.N.R. railways, died in hospital here after an illness of three months.

Newfoundland Base

Government To Strengthen Bases On Eastern Coast

Ottawa.—Newfoundland's strategically placed land and sea airplane bases at Gander lake and Botwood, guarded by Canadian troops since early in the war, will be strengthened by the expenditure of close to \$1,000,000 by the Canadian government in the near future, Air Minister Power announced.

Mr. Power is leaving for a survey of the eastern command, including the maritime provinces and Newfoundland, capacity as minister of national defence for air.

The minister discussed the progress of defence activities in the land, sea and air services. He will travel by air and will visit Halifax, Yarmouth, St. John, Sydney and other maritime provinces areas, as well as Newfoundland.

The minister discussed his plans at a press conference when he told of steps taken to provide adequate defences against possible invasion.

The Gander lake aerodrome, developed in peak time by the Imperial Airways and others associated in the establishment of a north Atlantic air mail and passenger service, is now closely guarded by Canadian troops.

The air mail and passenger service is still in operation, the minister said.

It is the intention of the department to extend facilities for defence forces in all three branches in Newfoundland while it is strategically situated at the northern Atlantic gateway to America more than 1,600 miles from enemy bases.

British Cruiser Sunk

Armed Merchant Cruiser Torpedoed By German Sub

London.—The 16,923-ton armed merchant cruiser Transylvania—once a popular liner—Indochina bound, sailing out of New York, has been torpedoed and sunk by a German submarine somewhere in the Atlantic.

The British government had taken no news from the Cunard Anchor Line.

An admiralty bulletin said:

"The secretary of the admiralty regrets to announce that the armed merchant cruiser Transylvania has been torpedoed and sunk by a German submarine somewhere in the Atlantic."

The British government had taken no news from the Cunard Anchor Line.

An admiralty bulletin said:

"The secretary of the admiralty regrets to announce that the armed merchant cruiser Transylvania has been torpedoed and sunk by a German submarine somewhere in the Atlantic."

The Transylvania was the seventh British liner to be sunk during the war.

Between 30 and 40 sailors were believed lost due to lifeboats capsizing in choppy seas.

More than 300 officers and men were saved and landed at a west coast port.

Most of the rescue work was done by ships that picked up distressed sailors and dashed to the stricken liner. The liner kept afloat almost four hours.

Prisoner Of War

King Leoopold Of Belgium Has His Children After Weeks Of Separation

Brussels.—King Leopold, a prisoner of war in his own castle, King Leoopold of Belgium has his children with him again—after weeks of separation—but he still awaits the return of hundreds of thousands of his countrymen who fled to France during Germany's invasion of the low countries.

About 1,500,000 Belgians were wandering refugees in France when the armistice was signed. They have been returning gradually to their homes.

Even before the conclusion of the Battle of France, Leopold did what he could to speed repatriation of Belgian refugees. He asked the government of Switzerland June 13 to negotiate with French and German authorities for the return of Belgians across Swiss frontier. Last month he won the Red Cross co-operation.

China's War Record

Hong Kong.—Chinese airmen have downed or destroyed on the ground a total of 848 Japanese planes and the total of 1,148 Japanese aircraft and ships. 40 Japanese war vessels in three years. The Chinese air command statement was issued on the third anniversary of the outbreak of Chinese-Japanese hostilities in Shanghai.

Edmonton Fatalities

Edmonton.—City police said Carl D. Fullman, about 50, a line department in Edmonton's electric light department, was killed instantly when he accidentally touched a high voltage wire.

SUPERIORITY OF BRITISH SEEN OVER ENEMY PLANES

London.—British pilots are fighting the German air force with a "different" feeling, since "bombs are dropping in our country," a squadron leader of the Royal Air Force told men in a press conference.

Mr. Leslie, winner of the Distinguished Service Order for rescuing his squadron commander who was shot down in France, and for shooting down 10 German planes, told possibly two others, when leading an offensive patrol over France in May:

"We fought desperately over France," he said, "but it's a different state of feeling when bombs drop on your own country."

"It makes men fight like the very deuce."

"When the air ministry announced the Royal Air Force has destroyed 78 German planes and lost 13 it was another other story. I am sure we have done more than twice others, even though we are not two others.

"The minister is making a statement to us that he is prepared to believe them because he knows checks and double checks are made before the figures are released."

This statement is made by J. F. Bowes-Lyon, minister of civil defence, who is in charge of the Home Office staff writer. He goes on to say:

"If the air ministry err at all it is on the side of under-statement, because it insists that all enemy losses must be reported and they don't count the ones that are not reported."

The German plane has been damaged so seriously its return to a home base is almost impossible, it will never find its way into the air ministry bulletins.

"It has to crash or break up."

Another reason is the better system of training R.A.F. pilots over German pilots.

"A third reason is the vulnerability of the big and slow-moving slow and cumbersome bomber against the fast and nimble fighter. This factor is double marked in the case of the German bomber which, unlike the British bomber, has not the protective gunners."

It is the psychological factor of the fighter pilot defending his own country and the strength and daring that comes from that consideration, particularly when the German fighters know the whole future of their country depends on their efforts."

Another reason is the psychological factor of the fighter pilot defending his own country and the strength and daring that comes from that consideration, particularly when the German fighters know the whole future of their country depends on their efforts."

CAMILLIEN HOUDÉ

Harvest Labor

No Appropriate Increase In Wages Has Been Reported

Winnipeg.—Despite a big demand for harvest labor in western Canada, there has been no great increase in harvest wages. Dominion government labor statistics show here.

Wages vary from \$2 a day for stoaking to \$4 a day paid to combine and swather operators.

Farmers in some areas have had trouble obtaining men to work for monthly wages of from \$30 to \$35 a month, but there has been no scarcity of day laborers for harvest work, according to reports received by the employment clearing house of the Employment Service of Canada, located here.

A scarcity of women farm workers has been reported from northern and western Saskatchewan and from parts of Alberta and British Columbia.

Wages for stockers in the four western provinces range from \$2 to \$2.25 a day, and for combine and swather operators, from \$3 to \$5. Board and room is included in all these wages.

For the basic wage, the basic wage for stockers is \$2 a day, according to the Winnipeg office of the employment service, but in some places \$2.25 is being paid.

An appreciable increase has been noted in wages, official said, although the basic wage has been increased to \$2.50 a day.

Morale of the coastal people is excellent. They have been toughened by bombing raids, so they merely take time out while the hottest bombing and gunning is going on, then carry on with their regular business.

BELIEVE GERMANY IS PREPARING TO TRY INVASION

Believe Invasion Is Coming

London.—Authentic sources report that Germany has troop concentrations in Norway and the Netherlands ready to attempt an invasion of Britain if present air attacks on Britain continue.

The reports said that Hitler has armed men ready in isolated parts of Norway and along the coast of Holland who have been practising co-operation with German naval forces.

Whether they will use as a military force against this country depends presumably on the ability of the Nazi air arm to gain mastery in Britain, or to concentrate even temporarily on the defence—something that has failed to achieve in almost a week of steady mass raids.

No matter in what form Hitler attempts to subdue this country he will rely heavily on air power.

URGENT NEED IN BRITAIN IS FOR MORE PLANES

London.—Hitler's little-push against the channel ports shows Britain's planes is for planes, planes, and more planes.

One feature of the aerial attacks is the methodical tactics of the Germans. They send over a wave of bombers to pierce the British air defense.

"Train" runs regularly, even though off-schedule, despite air raids.

On a Sunday morning, and there are many Sundays, the British air force boarding the train, another came.

I was standing on the station platform, waiting for the train to come to town. The station roof above me was standing.

The crowd was waiting, everyone under the concrete roofs.

Morale of the coastal people is excellent. They have been toughened by bombing raids, so they merely take time out while the hottest bombing and gunning is going on, then carry on with their regular business.

The reports said that Hitler has armed men ready in isolated parts of Norway and along the coast of Holland who have been practising co-operation with German naval forces.

Whether they will use as a military force against this country depends presumably on the ability of the Nazi air arm to gain mastery in Britain, or to concentrate even temporarily on the defence—something that has failed to achieve in almost a week of steady mass raids.

THE BOSS CLAN OF PARLIAMENT HILL

There must be something in a name—six of Canada's Members of Parliament are from the same family. Left to right are: Donald C. Ross (Lab.), Gordon J. Ross (Lab.), Moose Jaw; Lieut.-Col. Duncan G. Ross (Lab.), Middlesex East; Back row: George H. Ross (Lab.), Calgary East; Lieut.-Col. J. A. Ross (Con.), Souris; Mr. Tom Ross (Lab.), Hamilton East.

Cannot Be Concealed

British Unable To Hide Contempt

In British voices when Italy is referred to cannot be concealed. The contempt for Italy is not hidden by Cossacks or savages.

China, a truly disgruntled unit, is recalled, Spanish operations did nothing to remove the stain from Italian arms. Now, after sinking into war again, after Germany had accomplished the whole land fighting of the first campaign for the axis, Italians have proved nothing but timid Numenous superstitious.

The French Socialist clashed back with their tails down an Italian mission that arrived demanding the fulfillment of the Borden's capitulation. On the coast of Egypt and Libya a party of French citizens and naval officers were to have been handed over to a British escort, but they did not turn up. A British officer in an armored car bearing a flag of truce was sent to the Italian fort, and there found the party and its Italian escort within the walls, the escort not daring to approach closer as the party was handed over. The Italian was searched when the Italian officer commanding the escort asked the British officer to give him a safe conduct back to the next fortified post—through Italian territory.

A couple of days ago British and German diplomats were engaged in a discussion and one of the latter pointed out that, in the event of war, Italy would be Germany's ally, and another among the British "we had to have her last time." A little prior to Italy's back-stabbing entry into the war, a French general is credited with having said to his men: "If we win the war we will have to defeat two divisions to watch her. If she goes in on the side of Germany, it will take four divisions to defeat her. If she comes in on our side we will have to send six divisions to support her."

So far the French are concerned, things did not work out quite that way; but they did any number of things that made the difference. It was indeed an exhibition of a pretty low type of cowardice that enabled Italy to avoid another Caporetto.—St. John, N.B., Telegraph-Journal.

Might Influence Some

British People Advised To Ignore Italian Invasion of Britain

The Minister of Information is trying to persuade Britons that Lord Hay-Haw of Zeeson, Germany's ace English language propaganda broadcaster, isn't worth listening to.

One of his ads, for instance, gives this answer to the question of "What do I do if I come across German or Italian broadcasts when tuning my wireless?"

"It's up to me," now this slytcher wants me to listen to him. Am I going to do what he wants?" I remember that Gerxes lies over the air like parrot-troops dropping down on Britain—they are all part of a plan to get us down—which they won't!

"I remember nobody can trust a word Hay-Haw says. So just to make them waste some time I switch off their 'one out'."

Lord Hay-Haw is supposed to be a British traitor, broadcasts frequent programs criticizing the steps by which the British Commonwealth of Nations is forming.

He has a harsh voice with a tone of tremendous sarcasm.

He has had a huge following in Britain, largely because the British government, however, has been carried by him since last January, believing that enough weak-willed persons do a certain amount of harm to morale.

Saved By Penny

Two cents saved George E. Doherty, 49, of Chicago, from a jail sentence. Doherty was arrested by New York Central Police on charges of being a vagrant. Arguing his own case before a police court judge, Doherty pointed out that because he had two cents, could not be classed as a tramp.

From African Tribesmen

Wood having spread to the far corners of the British Empire that the great white King" needs help in his war against the world's gift-givers arrived at London from African tribesmen and Pacific islanders to swell Britain's war chest. They included 50 live turtles and 1,680 cases of rum.

Nearly 4,000 racing pigeons were supplied the Royal Air Force by British pigeon fanciers in one month.

Eggs with thin shells are laid by hens that get a diet poor in calcium

What Everybody Knows

Any Food Sent To Europe Would Be Taken By Nazis

The following letter by W. W. Davies, New London, New Hampshire, appeared in the New York Herald Tribune:

To the New York Herald Tribune:

England is just now beginning to starve.

The so-called "Ape" of Hitler, dropped from Hitler's airplanes, indicated that England's blockade is shutting off food from Germany, while a long hard winter, Hitler has been warned by his generals against an attempt to send armies across the Channel to invade England.

England is a slow method, but the food! food! man can and will win the war. Hitler is beginning to realize this. It is well.

Now what is finally starting? It is this: A whistled "Feed France!" heard beneath a British-American sub—*"Feed France!"*

Americans and military the British blockade and rend Hitler viciously rejoicing on his way to the conquest of America. Send to Liverpool or Bordeaux, and who gets 97 of the 100 barrels? Can any one with a grain of sense doubt that Hitler and Goering and Goebel and Hess and Von Ribbentrop and company appreciate the food and secure and use this American gift to France, or rather to Germany?

The French political Laval, sitting in his office, fortune teller, Boston negotiator, Mihail and Wagstaff will not eat, but Hitler and Mussolini have to eat. They humbly and obliquely sit and wait at Vichy—wait on Hitler.

The French general is credited with having said to his men: "Feed France! let me send food to that

French Army in England that is now placed under sentence of death by the Pétain government—that army of Frenchmen that has been trained

in the art of white feathering, white cliffs watching for the coming of the second armada. If we "Feed France" we feed Germany and crush Great Britain, and move the day of wrath nearer to the U.S.A. To

every one who asks, "What do we have to do?" we will have to de-

feat two divisions to watch her.

If she goes in on the side of Germany, it will take four divisions to defeat her. If she comes in on our side we will have to send six divisions to support her."

**SPACE NEEDED FOR THE
STORAGE OF GRAIN CROPS**

Faced with the problem of providing storage for this year's grain crops, farmers are supplied with the particulars of the space required for storing the grain by the provincial department of threshed grain elevators 1/4 cubic foot.

To determine the amount of space required, multiply the height given above by the height of the grain pile.

Multiply this figure by decimal eight (8), and the result is the number of bushels which must be placed in the bin.

Thus if 12 feet high, 10 feet wide and eight feet high, is 12x10x8 = 960 cubic feet; 960 cubic feet will hold 768 bushels.

If it is necessary to hold a grain crop to a greater height than 12 feet, multiply the height given above by the height of the grain pile.

The calculation is repeated. Since each bushel occupies 1/4 cubic foot, 1,000 bushels would require 1,000 cubic feet and so on.

If one divides the number of cubic feet occupied by a given amount of grain by the number of bushels to build the bin, the floor area is obtained. Thus 1,000 bushels in a bin 8 feet high and 12 feet wide will allow about 155 square feet or a floor about 12x13 feet in size.

WORLD'S GREATEST TRAVEL SYSTEM

**"Somebody
to see you!"**

IF EVERYBODY with something to interest you should come and ring your bell, what a nuisance it would be! Think of the swarming, jostling crowd, the stamping of feet on your porch and carpets!

Every week we know of many callers who come to see us. They are not there to buy, but they don't take up your whole day trying to get your attention. Instead, they do it in a way that is most considerate of you and your time and convenience. They never use in your newspaper!

In this way you have only to listen to those you know at a glance have something to interest you. They won't stay long, too, so you can gather quickly just what you want to know. You can receive and hear them all without noise or confusion in a very few minutes.

In fairness to yourself look over all the advertisements. The smallest and the largest—you never know which one will tell something that you really want to know.

LINE OF COMMUNICATION—Men of the New Zealand Divisional Signals—more of the Empire's troops now gathered in Britain—line up with motor cycles during training as dispatch riders.

**LINE ELEVATORS TO TEST
CROPS SUITED FOR SEED**

Line elevator companies have established a free service for all farmers whereby they may obtain authoritative information concerning the quality and suitability for seed-growing purposes of which they are growing this year. This new service is available through the Agricultural Department of the North-West Line Elevators Association.

Complete information may be obtained from any line elevator company. Farmers who desire to avail themselves of this service are advised to cut a five foot length of one dry row of grain and send it to their local line elevator.

The sample should be tied together and delivered to any local line elevator. The sample will then be sent to Winnipeg for identification and advice sent to the farmer as to the suitability of his crop for next year's seed.

The doctor of a country village had two children who were acknowledged to be the prettiest little girls in the district.

While the two children were out walking one day, they happened to walk past two small boys; one was living in the village, the other in the city.

"She's pretty," said the latter, "who are these little girls?"

"Those are the doctor's children," replied the village boy. "He always keeps his best for himself."

Friend: "I hear your son is getting on quite well."

Father: "I'll say so. Two years ago he wore my old suit. Now I wear his."

"Daddy, can you help me with my geography lesson?"

"No, boy. They've changed the names of all the places I knew."

**UNSATISFACTORIES CHARGE
CUSTOMERS**

are those
Who allow bills to lapse—accounts are fully payable by the first of each month.

—are those
Who pay only a portion of their bills, compelling merchants to carry balances from month to month.

—are those
Who purchase articles they do not fully intend to keep, and which they later attempt to return for credit—in a dampened condition.

—are those
Who make unjust claims and demand unreasonable allowances.

Careful of your credit. So desirable an asset to build; So easily broken down.

Grain farmers may have no fear of the rumored lumber shortage if they will build straw and wire bins for the storage of grain. Straw is the best material to use.

Straw bins are simple to construct. With a bed of two feet of straw on dry ground, a single post is driven into the ground. Then the straw is packed around the post all around and the grain threshed into the enclosure, a good temporary granary is assured, straw being the best material.

Straw bins are easily cleaned after use.

The straw and the grain are still important means of watering the garden, because for one thing they kill the moisture-pumping weeds. Even during a prolonged dry spell a hill of corn straw will soak up water and assimilate all the moisture in a square yard of ground. If obliged to compete with a sprinkler, straw bins are the answer.

The average gardener's blind faith in the sprinkler can be pathetic. Beyond a little monthly refreshment of the soil, the spring rain absorption is wasted or worse. The moisture that helps a crop materially is the moisture that gets down to the seeds of the root system, not the surface soil.

The average gardener's blind faith in the sprinkler can be pathetic. Beyond a little monthly refreshment of the soil, the spring rain absorption is wasted or worse. The moisture that helps a crop materially is the moisture that gets down to the seeds of the root system, not the surface soil.

When the seed bed is exceedingly dry, a judicious soaking of the opened seed furrow to promote germination might not be a bad idea, but after that if instead of toting pail of water from the sprinkler, the gardener uses the rake, hoe and scuffle sufficiently to keep down intruders, they would be surprised to find how well their gardens grow with the moisture provided by nature.
